

your dexterity test at jaguar land rover Solihull. everything you need to know

You're invited to the Jaguar Land Rover assessment centre for the next stages of your application. These will take place at the JLR Solihull site over one morning or afternoon so you don't need to visit us multiple times. Part of this assessment is a dexterity test which will ensure you are able to carry out the role of a production operative.

This document outlines what happens at the dexterity test and how you can make sure you are prepared.

top tips

Relax. If you panic or worry you are more likely to make mistakes

Arrive 10 minutes early - if you are one minute late to site you will not be able to take the test

Plan your parking, journey and arrival the day before

Wear comfortable yet smart clothes

what will happen on the day?

You will be booked in to attend the Jaguar Land Rover site and met by one of the Randstad team. You will be taken through the site to where the testing will take place and introduced to the JLR testers.

There are four stations which have a different challenge for you to complete. You will be shown how to complete the test on each station by the tester. You will have time to ask any questions and also have a read of the process instructions on the wall.

Once the test starts you will have around four minutes to complete the task. Each task is different. Some tasks will involve putting nuts and bolts into a board - other tests will be placing rubbers into holes. The key here is to **LISTEN** to the instructions and ensure you fully understand them before starting each task - if in doubt ask the trainer before you start.

preparation at home.

Try to practice at home before you come for your test. Here's a few suggestions which may help you get into shape for the test:

Use a nut and bolt and try using each hand to screw the nut and bolt together and then back off again. If you don't have any nuts and bolts try using just your right hand to unscrew a bottle top and the back on again, then try the same with your left hand.

If you have any old plugs, try dismantling them, then putting them back together again.

If you have an elastic band, wrap it around objects in the house such as a door handle and then take it back off again. Try doing with this with just your left hand, then just your right hand.

If you have never used a screwdriver - try and get yourself one (even if you can borrow from a friend). Try screwing a screw into some old wood or objects that you no longer need

your dexterity test at jaguar land rover BAC. everything you need to know

You're invited to the Jaguar Land Rover assessment centre for the next stages of your application. These will take place at the JLR Battery Assembly Centre site over one morning or afternoon so you don't need to visit us multiple times. Part of this assessment is a dexterity test which will ensure you are able to carry out the role of a production operative.
